

ComicCraft – AI Comic Story Creator

Project Design Phase

System Flow: User → Web Interface → FastAPI Backend → AI Story Services → Image Generation → Layout Builder → PDF Export → Comic Preview.

Frontend: HTML, CSS, JavaScript, and Jinja2 templates.

Backend: FastAPI receives and validates user input and coordinates services.

AI Services: Text generation for story structure and narration/dialogue, plus image generation for comic panels.

PDF Exporter: Creates the downloadable comic PDF.

Data Flow: User input → validation → story outline → narration/dialogue → image prompts → panel images → layout → PDF → preview.
