

ComicCraft – AI Comic Story Creator

Project Documentation Phase

Overview: ComicCraft is an AI-powered web application that converts a user's story idea into a five-panel comic.

User Procedure: Open ComicCraft; enter story prompt, character name, setting, tone, and art style; start generation; wait; review the comic; download the PDF.

Local Setup: Run `pip install -r requirements.txt`, then `python -m uvicorn app.main:app --reload`, and open `http://127.0.0.1:8000`.

Security Note: Never upload a `.env` file containing API keys to a public GitHub repository. Use `.env.example` instead.

Documentation Deliverables: Requirements, system design, source code, testing report, user guide, project report, and demonstration presentation.
